HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
1. Introduction

The dissertation was conducted at Raman Research Institute (RRI), a pioneering institute in research in physics. The research was started by S. N. Bose in the early 1920s. The institute was established by the Government of India with the aim of promoting research in various fields of science.

2. Objective of the study

The objective of the study was to determine the impact of digitalization on research practices in various fields of science. The study was conducted at Raman Research Institute (RRI), a leading institute in the field of research in physics.

3. Research Methodology

The study was conducted using a mixed-method approach. Descriptive statistics were used to analyze the data collected from the different sources. The data was analyzed using statistical software.

4. Data Collection

The study involved the collection of data from various sources. The data was collected using a combination of qualitative and quantitative methods.

5. Data Analysis

The data was analyzed using statistical methods. The results were interpreted and presented in the form of tables and graphs.

6. Conclusion

The study concluded that digitalization has had a significant impact on research practices in various fields of science. The use of digital tools and technologies has improved the efficiency and effectiveness of research processes.
